· App Architecture

You already know what
great output looks like.
You just don't know how to ask for it.

Most people can recognise excellent AI output the moment they see it. The skill barrier isn't taste — it's translation. Got Messy removes that barrier by letting you deconstruct any high-quality output into the exact prompt structure that created it.

2. THE ARCHITECT — 4 PHASES DETAIL

The Drop
(Smart Paste)

Phase 2.1 · Critical MVP · Impact 10/10

2.1.1 The Dump Zone — Accepts plain text, PDFs, URLs, emails. No organisation required. 2.1.2 Intent Classifier — Scans for Action Verbs (Task), Role signals (Persona), Output keywords (Format). Visual NLP auto-tagging animation.

Triple-Pillar
Editor

Phase 2.2 · Critical MVP · Impact 10/10

2.2.1 Persona Selector — Role Library. 2.2.2 Task Definer — Action Verbs. 2.2.3 Format Gallery — Visual Output Cards. 2.2.4 Context Manager — File Upload / Text Block. Enforces "Job + Task + Look" methodology.

Test Flight
(Validation)

Phase 2.3 · High Priority · Impact 8/10

2.3.1 Split-Screen Simulator — Editor vs Live Preview. 2.3.2 Variable Injector — Placeholder management reusable templates. 2.3.3 Hallucination Risk Score (V2). Validates the prompt works before deployment.

Export &
Deploy

Phase 2.4 · High Priority · Impact 7/10

Copy to Clipboard · Save to My Good Stuff · Share with Team · Open in AI (deep link to ChatGPT / Gemini / Claude). Gets the polished prompt into the user's AI workflow of choice.

3. SMART PASTE LOGIC FLOW — RAW CHAOS TO STRUCTURED PROMPT

INPUT

The Drop

Accepts plain text, PDFs, URLs, or emails. Raw material — no organisation required.

NLP ANALYSIS

Intent Classifier

Scans for Action Verbs (Task), Role signals (Persona), and Output keywords (Format). Visual auto-tagging.

SAFETY

Sanity Check

Flags PII (emails, phones, names) and context bleed. Sanitisation Level: Strict / Standard per user setting.

OUTPUT

Pillar Mapping

Auto-populates Persona, Task, and Format in Triple-Pillar Editor. User reviews and refines.

4. LIFE OS EDITION — USER DNA & WORKFLOW TOOLS

User DNA — Persistent Global Context

Set once at onboarding. Populates every prompt automatically so the app knows who it's working for.
